PROFILE

Former Server Administrator with two years of professional experience. Driven by a passion for computers and technology. Working in a Japanese corporation instilled in me a disciplined, methodical work ethic, along with strong problem-solving skills and a commitment to efficiency.

Currently pursuing a Bachelor's degree in Applied Computer Science at UCLL. My experience in Machine Learning, Data analytics and Data engineering, combined with my studies, has deepened my appreciation for Python and its crucial role in streamlining processes through automation and data analysis.

ACHIEVEMENTS & PROJECTS

Generated labeled dataset with SIFT; trained and evaluated a YOLO model in order to track and notice faulty gas bottles for PrimaGaz (a belgian gas firm).

Conducted an analysis on a stroke occurrence prediction machine learning model and successfully developed a Random Forest model that predicts stroke occurrence with an accuracy of 80%.

Developed a web application in a 10-member SCRUM team for Belfius, a Belgian bank and insurance company, using TypeScript, CSS, and Java over 5 sprints (2 weeks each) to replace Google Forms for internal event automated management.

Implemented a LLM model integrated with OpenCV to create an aid system of web app (React framework), web extension and Python tools with the aim to assist visually impaired individuals.

Developed a Mario-inspired game using Python and PyGame for UCLL IT Talents Days.

Executed data cleaning, data validation and built RAG pipelines monitored by Apache Airflow, stored the data in Microsoft Azure Blob for two datasets of house price and car price in Belgium.

Successfully improved the monitoring of servers by composing spreadsheet with VBA that tracks server alerts automatically (5 hours reduced to 1 hour of work).

LANGUAGE PROFICIENCY

Vietnamese native
English fluent
Japanese fluent
German beginner

TECHNICAL SKILLS

Programming language

Python
HTML, CSS, JavaScript, Java, TypeScript
SQL, ShinyR
Microsoft Office Excel VBA

Others

LLMs, Neuron Networks
Computer Vision (OpenCV, YOLO,...)
Apache Airflow, Docker Image
Azure, Postgres, MongoDB
Data analytic techniques

EXPERIENCE

Server Administrator | Apr 21 - Jul 23

Rakuten Bank, Ltd. (Japan)

Supported technologies: Windows Server, RedHat, Linux, Oracle Solaris SunOS, Virtualization (VMware), Backup and disaster recovery solutions (Logsystem), Database management (SQL, Oracle), Networking (TCP/IP, DNS, DHCP, VLANs)

- Server/Network device monitoring via Zabbix (e.g. CPU, GPU, log, memory, disk, trap)
- Server/Network device maintenance, optimization and troubleshooting
- Monthly hardware check-ups
- Executing daily, monthly, and yearly server backups
- Navigating network traffic for maintenance purposes
- Composing standard operation procedures (SOPs)

Helpdesk Support | Jan 20 - Mar 21

Kyushu Institute of Information Sciences (Japan)

- Provide computer support (Microsoft Office installment, error troubleshooting)
- Provide hardware setup support (help set up projector, internet cables)
- Regularly inform teachers and students about new cyber attacks
- Organize classes for teachers and students to raise awareness of network security

EDUCATION

B. of Applied Computer Science | Sep 23 - Now
UC Leuven-Limburg (Belgium)

B. of Informatics & Management | Apr 17 - Mar 21
Kyushu Institute of Information Sciences (Japan)
